ABSTRACT

This study aims to develop empty package management software. We develop software to collect information of empty package to enhance the capacity of empty package data searching and comparing to this program is named "Empty Package Control". It is developed using Microsoft Visual Basic 6.0 and Microsoft Access. This program collect truck information of Logistic Company, Supplier, empty package of NISSAN Company. Not only, this program is database of the company if is also can print all required report to make easier check and control data.
